## Summary

Mid-level FullStack Software Engineer specializing in Flutter, with expertise in native application development for Android and iOS. Focused on continuous delivery with clean, testable, and maintainable code, technical collaboration, and code reviews. Committed to UI/UX excellence with pixel-perfect design fidelity and performance optimization. Driven by agility, proactivity, and continuous improvement.

## Education

**Computer Engineering** — Universidade SENAI Cimatec — Salvador, Brazil — 2021–2026

## Skills

- **Mobile:** Flutter, Dart, BLoC, Provider, Riverpod, MobX, Drift ORM, Secure Storage, Geolocation, Flutter Web, Android/Kotlin interoperability, Jetpack Compose, Swift, SwiftUI, Push Notifications (FCM), Offline-first, Caching
- **Backend:** ASP.NET (Entity Framework), Node.js, TypeScript, Express.js, NestJS
- **Cloud/DevOps:** AWS Lambda, API Gateway, DynamoDB, Cognito, Docker, CI/CD, GitHub Actions, Fastlane
- **Data:** PostgreSQL, Supabase, Firebase, MySQL, SQLite
- **Architecture/Quality:** Clean Architecture, Hexagonal Architecture, MVVM, DDD, TDD, REST APIs, gRPC, Protocol Buffers, Unit/Widget Tests, Sentry, Mixpanel, Firebase Crashlytics, Grafana
- **Design:** Figma, Rive, Lottie
- **Languages:** Portuguese (Native), English (B2)

## Professional Experience

### FullStack Software Engineer | CSMTec | 2026–present

- Mobile application development using Jetpack Compose for Android and SwiftUI for iOS.
- Architecture and development of cross-platform Flutter plugins following the Federated Plugin pattern, implementing native communication via MethodChannel with Kotlin (Android) and Swift (iOS) bridges to expose native APIs to the Dart layer.
- Development of a multi-protocol integration layer for medical devices, including BLE (Bluetooth Low-Energy), USB Serial, and proprietary protocol communication.
- Responsible for driver abstraction and the architecture of the real-time data ingestion pipeline, supporting multiple medical devices communicating concurrently with the system.

### Software Engineer | F.R Dev | 2024–2025

- Built multiple web and mobile Micro-SaaS products using Flutter and serverless backends (AWS/Supabase), applying DDD, Hexagonal Architecture, and offline-first strategies with sync-queue and caching.
- Designed and implemented REST APIs with Node.js and Express.js, prioritizing security and scalability.
- Set up CI/CD pipelines, unit/widget test suites, and Docker environments, improving release reliability and velocity.
- Ensured pixel-perfect design fidelity and optimized performance, monitoring response times and memory consumption.

### Mobile Developer | Petize | 2023–2025

- Applied Hexagonal Architecture with TDD, achieving high test coverage on core modules and reducing production bugs.
- Implemented the BLoC pattern for state management, enforcing a clean separation between UI and business logic; optimized Lottie animations to maintain consistent 60fps rendering.
- Automated the release pipeline using Fastlane integrated with CI/CD and automated test suites.
- Led REST API integrations and push notification delivery via Firebase Cloud Messaging (FCM).

**Mobile Developer | Ommed | 2021**

- Implemented Clean Architecture and TDD on critical application features.
- Established microservice communication via gRPC/Protocol Buffers.
- Managed complex state using MobX with reactive asynchronous streams.

## Projects

- **Aibum** — AI-powered coloring image generation. Flutter Web; Supabase and Express.js APIs.
- **KeepLinked** — Link organizer with folders, tags, and privacy controls. Flutter; Supabase/Express.js APIs.
- **Wander Level** — Offline-first mobile app with sync-queue. Flutter; Drift ORM; Supabase.
- **FinanceTracker** — Personal finance mobile app. Flutter; AWS serverless backend (DynamoDB, Lambda, API Gateway, Cognito).
